

BALANCED ALKALIZED WATER + MAGNESIUM

ADVANTAGES OF THE FILTER TECHNOLOGY

-  + Increases the pH value of the water
-  + Reduces odor- and taste-disturbing substances such as chlorine as well as organic contaminants
-  + Reduces particles >200 µm (sand, particles from the pipe) and heavy metals (lead and copper)

Balanced Alkalized Water + Magnesium		
GENERAL	Capacity	120 l
	Change Interval	4 weeks
	Lead Time	5 min
	pH-value ³	>8.5
BASIC FUNCTION	Particle filtration	200 µm
	Chlorine reduction	✓
	Lead reduction	✓
	Copper reduction	✓
	Reduction of organic substances	✓
ADDITIONAL FUNCTION	Limescale reduction	-
	Magnesium release ⁴	10-20 mg/l
	Zinc release ⁴	-
	Silicate release ⁴	-

1 Carbonate hardness | 2 Total hardness | 3 at pH 7,0 in the inelt | 4 at 15-18 °d TH

INTERESTING FACTS ABOUT ALKALINE WATER

Alkaline water has a higher pH than normal drinking water, which is usually around 7. Alkaline water is credited with having numerous positive and invigorating properties for both body and mind. For example, it helps compensate for any over-acidification in the body and keeps maintaining the acid-base balance. Underpinning this balance is a complex regulatory system that ensures that the different areas of the body are regulated by the correct pH value. It is important to understand that acids and alkalis are neither good nor bad. They are all about balance. Our metabolism functions problem-free for as long as the different areas of the body maintain their correct pH value. However, if the balance between our body's acids and alkalis is lost, the effect on our long-term health is negative.
